Figure 5 - figure supplement 1. **Effect of sorafenib on cell viability**. (*A*) Glutamate release from same cell lines in response to erastin or sorafenib. (*B*) Viability of five cell lines (HT-1080, TC-32, 143B, Calu-1 and U2OS) in response to 48 hr treatment with increasing doses of erastin or sorafenib +/- DMSO (squares, black) or 5 μM Fer-1 (triangles, purple). Data shown is the average of three independent biological replicates.
