

Figure 4 – figure supplement 1. Electron density at the nucleoside-binding site of vcCNT-7C8C-cytidine. The nucleoside-binding site of vcCNT-7C8C bound to cytidine is shown in stereo in stick representation in the same orientation and colored as the structures in Figure 2. Cytidine is yellow and the red spheres are water molecules. The resolution is 2.6 Å and density shown is from a $2F_o - F_c$ electron density map contoured at 1σ .
