

Figure 4 – figure supplement 2. Electron density at the nucleoside-binding site of vcCNT-7C8C-gemcitabine. The nucleoside-binding site of vcCNT-7C8C bound to gemcitabine is shown in stereo in stick representation in the same orientation and colored as in Figure 4C. Gemcitabine is yellow and the red sphere is a water molecule. The resolution is 2.9 Å and density shown is from a $2F_o - F_c$ electron density map contoured at 1σ .
