

Figure 3-figure supplement 1

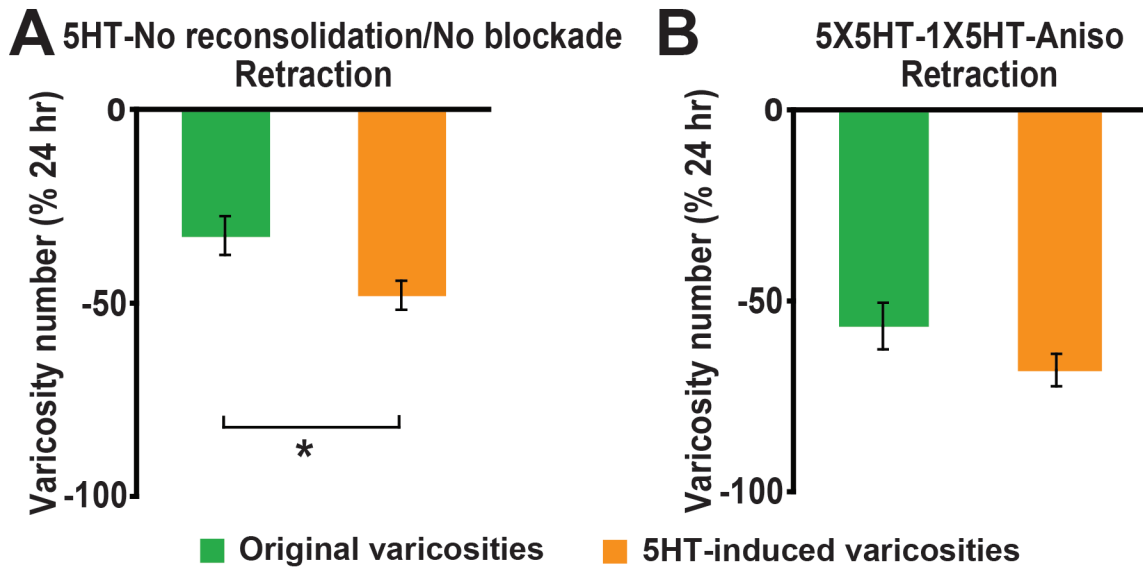

Figure 3-figure supplement 1. Comparison of retraction of Original and 5HT-induced varicosities between 24-48 hr in the reconsolidation blockade experiments. **(A)** The percent retraction of 5HT-induced varicosities ($47.7 \pm 3.7\%$) was significantly greater than that of the Original varicosities ($32.3 \pm 5.1\%$, $p < 0.02$, two-tailed t -test) in the 5HT-No reconsolidation/No blockade group. **(B)** The percent retraction of the 5HT-induced varicosities ($67.9 \pm 4.2\%$) did not differ significantly from that of Original varicosities ($56.4 \pm 6.1\%$) in the 5X5HT-1X5HT-Aniso group.
