

Figure 5-figure supplement 1

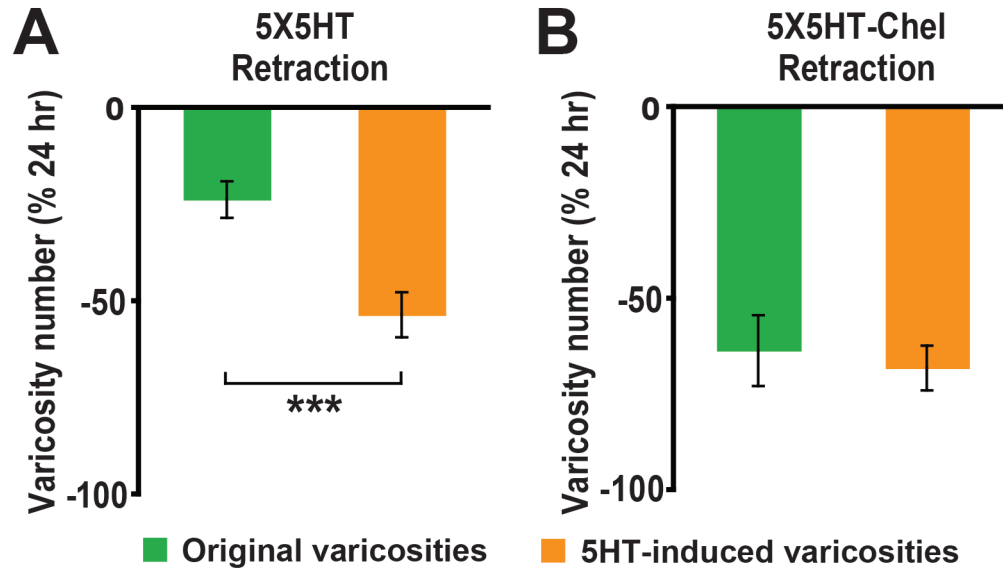

Figure 5-figure supplement 1. Comparison of retraction of Original and 5HT-induced varicosities between 24-48 hr in the chelerythrine treatment experiments. **(A)** The difference in the percent retraction between 5X5HT-induced ($53.4.0 \pm 5.8\%$) and Original ($23.5 \pm 4.7\%$) varicosities was highly significant in the 5X5HT group ($p < 0.001$, two-tailed t -test). **(B)** There was no significant difference in the percent retraction between 5HT-induced ($68.0 \pm 5.8\%$) and Original ($63.4 \pm 9.3\%$) varicosities in the 5X5HT-Chel group.
