

Figure 3-supplement 3

Gpr52's effect is not mediated by Rap1 or Rap2

Htt western-blot

Htt level changes measured by HTRF

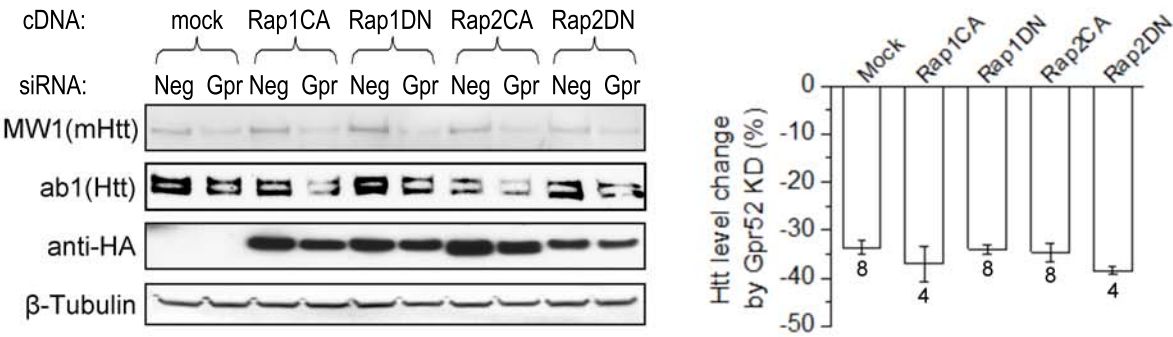

Figure 3-supplement 3. Gpr52's effect is not mediated by Rap1 or Rap2.

Left: Representative western-blot of STHdh^{Q7/Q111} cells transfected with the Gpr52 siRNA (Gpr52_si2) versus control siRNA, and then with constitutively active or dominant negative Rap1 (Rap1CA or Rap1DN) or Rap2 (Rap2CA or Rap2DN). The Bars plot: Htt level reduction (%) measured by 2B7/2166 HTRF of the total lysates of cells with same transfections as in the western-blot.
