

Figure 4 – supplement 3. High-dose tamoxifen administration does not induce pancreatitis. (A-D) Low- and **(A'-D')** high-magnification H&E staining of wild-type pancreata, fixed 24 hours after indicated treatment. **(E-H)** Immunofluorescence for CK19 (red), CD45 (green) and DAPI (blue), highlighting inflammatory cells in the exocrine pancreas. Scale bars: (A-D) 200 μ m, (A'-D') 100 μ m, (E-H) 50 μ m.
