

Fig. 4-figure supplement 1. Increased *SUI1* gene dosage partially rescues the *Slg*⁻ phenotype of *RPS5* mutations *E144R* and *R225K*.

Ten-fold serial dilutions of transformants of strains containing the indicated *RPS5* alleles from Fig. 3A harboring sc *SUI1* plasmid pPMB21 or empty vector were spotted on SD+His+Ura and incubated at 30°C for 3da. All strains were spotted in parallel on plates of identical medium.
