

Figure 1—Figure Supplement 1. Germ cell sorted by Fluorescence-Activated Cell Sorting (FACS).

Sorting of fluorescent germ cell from 26-dpf gonad by FACS. Cells within the rectangular or irregular box were selected. Pseudocolors indicates four different gating, P1 to P4. After gating, germ cells from WT (+/+) or *foxl2*^{10i/10i} (-/-) with *piwil1:egfp* transgenic background were collected.
