

UCP1

A Western blot showing UCP1 protein levels across six lanes. A red box highlights the bands, which are of varying intensity, with the third lane showing the most prominent band.

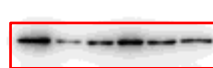

FLAG

A Western blot showing FLAG-tagged protein levels across six lanes. A red box highlights the bands, with the second and fifth lanes showing the most intense bands.

HSP90

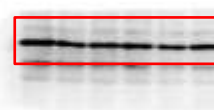

A Western blot showing HSP90 protein levels across six lanes. A red box highlights the bands, which appear relatively consistent in intensity across all lanes.

pCREB

A Western blot showing pCREB protein levels across six lanes. A red box highlights the bands, which are of varying intensity, with the third and fourth lanes showing the most intense bands.

CREB

CREB

A Western blot showing CREB protein levels across six lanes. A red box highlights the bands, which are of varying intensity, with the third and fourth lanes showing the most intense bands.
