

Figure 7J Source data. Original membranes corresponding to Figure 7, panel J. Western blot analysis MTAP, HSP90, and actin of NEJF10 whole cell lysates cultured from 2D normoxia (2D-Nor) and hypoxia (2D-HY) and 3D normoxia (3D-Nor) for 3 days. Membrane was probed MTAP first. Then, membrane was cut cross red line into 2 membranes for probing HSP90 and actin.
