

**Figure 4, Source Data 1.** Original membranes corresponding to Figure 4. Lanes 1–2 correspond to GFP control cells without or with exogenous ATP5I expression, respectively. Lanes 3–4 correspond to ATP5I guide #1 cells without or with exogenous ATP5I expression, respectively. Lanes 5–6 correspond to ATP5I guide #2 cells without or with exogenous ATP5I expression, respectively. Apparent molecular weight positions are indicated using the annotated blue prestained protein marker.
