

Western blot analysis showing Flag-USO1 protein levels. The blot is divided into two main sections: Input and IP. Each section contains four lanes labeled -, WT, A, and D. The Input section shows strong bands for all lanes, while the IP section shows bands only for the WT, A, and D lanes, indicating successful immunoprecipitation. A molecular weight marker of -100KD is indicated on the right.

	Input				IP			
	-	WT	A	D	-	WT	A	D
Flag-USO1	Strong	Strong	Strong	Strong	Weak	Strong	Strong	Strong
