

**Source image for Figure 1, supplement 1c.** Colorimetric image of BioRad Precision Plus Dual-Stained ladder (Lane 1) merged with chemiluminescence image. All samples are whole cell lysates from HEK FcGR cells transiently transfected with the indicated construct and infected with *WT Legionella pneumophila* for 5 hours. Note that the second half of the experiment was not discussed in the manuscript and therefore is not labeled here for the sake of clarity.
