

Materials Design Analysis Reporting (MDAR) **Checklist for Authors**

The [MDAR framework](#) establishes a minimum set of requirements in transparent reporting mainly applicable to studies in the life sciences.

eLife asks authors to **provide detailed information within their article** to facilitate the interpretation and replication of their work. Authors can also upload supporting materials to comply with relevant reporting guidelines for health-related research (see [EQUATOR Network](#)), life science research (see the [BioSharing Information Resource](#)), or animal research (see the [ARRIVE Guidelines](#) and the [STRANGE Framework](#); for details, see *eLife*'s [Journal Policies](#)). Where applicable, authors should refer to any relevant reporting standards materials in this form.

For all that apply, please note **where in the article** the information is provided. Please note that we also collect information about data availability and ethics in the submission form.

Materials:

Newly created materials	Indicate where provided: section/figure legend	N/A
The manuscript includes a dedicated "materials availability statement" providing transparent disclosure about availability of newly created materials including details on how materials can be accessed and describing any restrictions on access.		N/A

Antibodies	Indicate where provided: section/figure legend	N/A
For commercial reagents, provide supplier name, catalogue number and RRID , if available.	Information is provided in Materials and Methods under subsection "Hybridisation Chain reaction (HCR)": nc82 antibody was obtained from DSHB, RRID: AB2314866.	

DNA and RNA sequences	Indicate where provided: section/figure legend	N/A
Short novel DNA or RNA including primers, probes: Sequences should be included or deposited in a public repository.	Sequences of primer used are provided in Table 1. HCR <i>in situ</i> hybridization probes were obtained from Molecular Instruments Inc, CA, USA and are proprietary in nature.	

Cell materials	Indicate where provided: section/figure legend	N/A
Cell lines: Provide species information, strain. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID.		N/A
Primary cultures: Provide species, strain, sex of origin, genetic modification status.		N/A

Experimental animals	Indicate where provided: section/figure legend	N/A
Laboratory animals or Model organisms: Provide species, strain, sex, age, genetic modification status. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID.	Information is provided in Materials and Methods under subsection "Mosquito culture". <i>Anopheles stephensi</i> : Wild-type Indian strain; Bangalore strain, TIGS-1. <i>Aedes aegypti</i> : Wild-type, Indian strain, Bangalore collection. Both male and female mosquitoes of varying ages were used, details are provided for each experiment in the Materials and Methods.	
Animal observed in or captured from the field: Provide species, sex, and age where possible.		N/A

Plants and microbes	Indicate where provided: section/figure legend	N/A
Plants: provide species and strain, ecotype and cultivar where relevant, unique accession number if available, and source (including location for collected wild specimens).		N/A
Microbes: provide species and strain, unique accession number if available, and source.		N/A

Human research participants	Indicate where provided: section/figure legend) or state if these demographics were not collected	N/A

If collected and within the bounds of privacy constraints report on age, sex, gender and ethnicity for all study participants.		N/A
--	--	-----

Design:

Study protocol	Indicate where provided: section/figure legend	N/A
If the study protocol has been pre-registered, provide DOI. For clinical trials, provide the trial registration number OR cite DOI.		N/A

Laboratory protocol	Indicate where provided: section/figure legend	N/A
Provide DOI OR other citation details if detailed step-by-step protocols are available.	All detailed protocols are provided in Materials and Methods	

Experimental study design (statistics details) *		
For in vivo studies: State whether and how the following have been done	Indicate where provided: section/figure legend. If it could have been done, but was not, write "not done"	N/A
Sample size determination	Not done	
Randomisation	Not done	
Blinding	Blinding was done for some of the host seeking assays along with the inclusion of a positive control.	
Inclusion/exclusion criteria	Details are provided in the Materials and Methods for each experiment, if applicable. For post-blood meal feeding behaviours, only fully fed females were used for the subsequent assays. For blood-feeding assays, post-oviposition, gravid females were not considered for the analysis. For Y-maze olfactory assay for host-seeking behaviours, runs	

	with less than 50% participation (except those for D0 and blank runs) were not considered.	
--	--	--

Sample definition and in-laboratory replication	Indicate where provided: section/figure legend	N/A
State number of times the experiment was replicated in the laboratory.	Replicate information is provided for each experiment in its respective figure, figure legend and method section.	
Define whether data describe technical or biological replicates.	Both biological and technical replicates were included wherever possible. Mosquitoes from different batches were considered as biological replicates, while those from the same batch were considered as technical replicates. For each experiment, details are provided in the Materials and Methods.	

Ethics	Indicate where provided: section/submission form	N/A
Studies involving human participants: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.		N/A
Studies involving experimental animals: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Details are provided in Materials and Methods under subsection "Regulatory permissions". This project was approved by the Institutional Human Ethics Committee (Ref: inStem/IEC-22/02) and the Institutional Biosafety Committee (TIGS/M-7/8/2020-1).	
Studies involving specimen and field samples: State if relevant permits obtained, provide details of authority approving study; if none were required, explain why.		N/A

Dual Use Research of Concern (DURC)	Indicate where provided: section/submission form	N/A
If study is subject to dual use research of concern regulations, state the authority granting approval and reference number for the regulatory approval.		N/A

Analysis:

Attrition	Indicate where provided: section/figure legend	N/A
<p>Describe whether exclusion criteria were pre-established. Report if sample or data points were omitted from analysis. If yes, report if this was due to attrition or intentional exclusion and provide justification.</p>	<p>All exclusion criteria were intentional and pre-established based on objectives of the assay :</p> <p>For post-blood meal feeding behaviours, only fully fed females were used for the subsequent assays. This was done to ensure that the second blood meal was not driven by an incomplete first blood meal.</p> <p>For blood-feeding assays, post-oviposition, gravid females were not considered for the analysis. This was done to ensure that the females have entered the second gonotrophic cycle.</p> <p>For Y-maze olfactory assay for host-seeking behaviours, runs with less than 50% participation (except those for D0 and blank runs) were not considered. This is standard practice because poor participation indicates ill health of mosquitoes or problems in the experimental conditions. Day 0 and blank runs are expected to have low participation as mosquitoes either have no cues to be motivated to participate (blanks) or are known to not be interested in human odours at that stage (D0).</p> <p>Details are provided in the Materials and Methods for each experiment, if applicable.</p>	

Statistics	Indicate where provided: section/figure legend	N/A
<p>Describe statistical tests used and justify choice of tests.</p>	<p>Statistical tests used for each experiment are indicated in the respective figures and figure legends. For analysis of feeding behaviours, details are provided in Materials and Methods under subsection "Statistical analysis of feeding behaviours".</p>	

Data availability	Indicate where provided: section/submission form	N/A
For newly created and reused datasets, the manuscript includes a data availability statement that provides details for access (or notes restrictions on access).	Details are provided in Materials and Methods under subsection "Data availability".	
When newly created datasets are publicly available, provide accession number in repository OR DOI and licensing details where available.	Newly created brain RNAseq raw fastq files have been deposited at the National Center for Biotechnology Information (NCBI) Sequence Read Archive (SRA), under the BioProject ID PRJNA1297931.	
If reused data is publicly available provide accession number in repository OR DOI, OR URL, OR citation.	Publicly available data from SRX620223, SRX618937 and SRX620224; BioProject PRJNA253267 were used in this study.	

Code availability	Indicate where provided: section/figure legend	N/A
For any computer code/software/mathematical algorithms essential for replicating the main findings of the study, whether newly generated or re-used, the manuscript includes a data availability statement that provides details for access or notes restrictions.	No new code was generated. Standard pipelines were used for all the analyses. Algorithms used are mentioned in the Materials and Methods section, wherever applicable.	
Where newly generated code is publicly available, provide accession number in repository, OR DOI OR URL and licensing details where available. State any restrictions on code availability or accessibility.		N/A
If reused code is publicly available provide accession number in repository OR DOI OR URL, OR citation.	Wherever previously published analysis codes have been used, we have referred to the original citations.	N/A

Reporting:

The MDAR framework recommends adoption of discipline-specific guidelines, established and endorsed through community initiatives.

Adherence to community standards	Indicate where provided: section/figure legend	N/A
State if relevant guidelines (e.g., ICMJE, MIBBI, ARRIVE, STRANGE) have been followed, and whether a checklist (e.g., CONSORT, PRISMA, ARRIVE) is provided with the manuscript.		N/A

* We provide the following guidance regarding transparent reporting and statistics; we also refer authors to [Ten common statistical mistakes to watch out for when writing or reviewing a manuscript](#).

Sample-size estimation

- You should state whether an appropriate sample size was computed when the study was being designed
- You should state the statistical method of sample size computation and any required assumptions
- If no explicit power analysis was used, you should describe how you decided what sample (replicate) size (number) to use

Replicates

- You should report how often each experiment was performed
- You should include a definition of biological versus technical replication
- The data obtained should be provided and sufficient information should be provided to indicate the number of independent biological and/or technical replicates
- If you encountered any outliers, you should describe how these were handled
- Criteria for exclusion/inclusion of data should be clearly stated
- High-throughput sequence data should be uploaded before submission, with a private link for reviewers provided (these are available from both GEO and ArrayExpress)

Statistical reporting

- Statistical analysis methods should be described and justified
- Raw data should be presented in figures whenever informative to do so (typically when N per group is less than 10)
- For each experiment, you should identify the statistical tests used, exact values of N, definitions of center, methods of multiple test correction, and dispersion and precision measures (e.g., mean, median, SD, SEM, confidence intervals; and, for the major substantive results, a measure of effect size (e.g., Pearson's r, Cohen's d)
- Report exact p-values wherever possible alongside the summary statistics and 95% confidence intervals. These should be reported for all key questions and not only when the p-value is less than 0.05.

Group allocation

- Indicate how samples were allocated into experimental groups (in the case of clinical studies, please specify allocation to treatment method); if randomization was used, please also state if restricted randomization was applied
- Indicate if masking was used during group allocation, data collection and/or data analysis
