

Figure 2 – figure supplement 2. Distribution of myelin (cyan) on axon fragments (red) categorized as inhibitory. Left, frontal view. Right, side view. Large red spheres: inhibitory somata reached during categorization of axon fragments; medium-sized spheres indicate the position of tracing seeds of categorized axon fragments (green: excitatory; red: inhibitory; yellow: unclassifiable). Smallest red spheres indicate the position of synapses made by the inhibitory axon fragments. Scale bar ~50 μm .
