**Figure 1 – figure supplement 2. Amplification of changes in gene expression emanating from T21. (A)** Manhattan plot showing most DEGs (red) are not encoded on chr21. **(B)** Example box and whisker plots of chr21 (green) and non-chr21 (black) DEGs. mRNA expression values are displayed in reads per kilobase per million (RPKM). Benjamini-Hochberg adjusted p-values were calculated using DESeq2
