

A

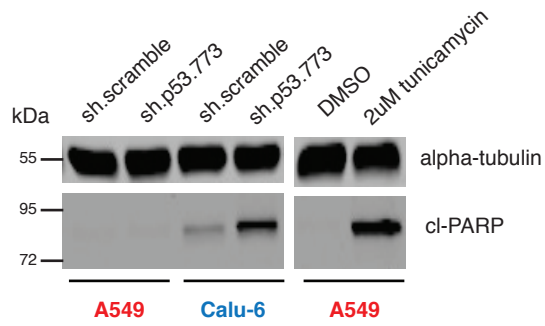

Figure 3- figure supplement 6.

Knockdown of p53 induces apoptosis in cell expressing in p53 exon-6 truncation.

A. Cleaved-PARP Western blot analysis upon p53 knockdown in A549 and Calu-6 cell lines 5 days after shRNA infection. As a positive control, A549 were treated with DMSO or 2uM tunicamycin for 72h. Alpha-tubulin was used as a loading control.
