

Figure 1-figure supplement 3

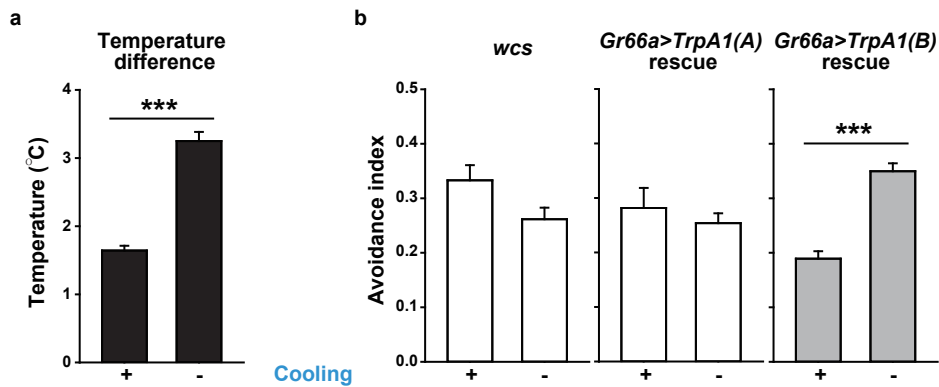

Figure 1-figure supplement 3: Temperature changes in Café assays that measure UV-dependent feeding avoidance. (a) Temperature increases inside of vials with (n=21) or without (n=8) active air-cooling. **(b)** UV-induced feeding avoidance was temperature-dependent only for those expressing highly temperature-sensitive TRPA1(B) (n=4-9). ***: p<0.001, Student's t-test or Mann-Whitney U test.
