

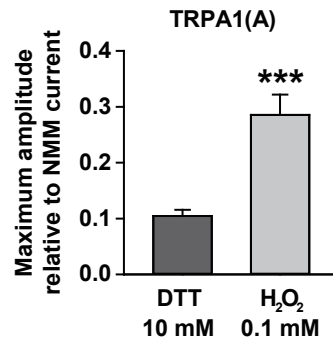

## Figure 4-figure supplement 2

**Figure 4-figure supplement 2: Maximal current amplitudes of TRPA1(A) by H<sub>2</sub>O<sub>2</sub> were intermediate between those of DTT and NMM.** TRPA1(A) currents in *Xenopus* oocytes that were evoked by either 10 mM DTT (n=5) or 0.1 mM H<sub>2</sub>O<sub>2</sub> (n=10) were normalized by currents induced by following 0.1 mM NMM application. The indicated concentrations for the chemicals yielded maximal current responses at -60 mV which were used for estimation of the maximum current amplitudes. \*\*\*: p<0.001. Mann-Whitney U test.
