

Figure 4—figure supplement 4. Effect of mutation of *TFIIA γ 1* on the expression of disease susceptibility gene *Os8N3* after *Xoo* infection. Plants were inoculated with *Xoo* PXO99 at the booting stage. Each bar represents mean (3 replicates) \pm standard deviation. b, significant difference between IRBB5 and transgenic plants at $P < 0.01$. ck, before *Xoo* inoculation.
