

Figure 4—figure supplement 3. Effect of suppressing *TFIIAγ1* on rice resistance to *Xoo* strain PXO99. Plants were inoculated with PXO99 at the booting stage. RNA was isolated from the flag leaves. WT, wild-type Zhonghua 11. Each bar represents mean (3 replicates for gene expression and 5 to 10 leaves from one plant for lesion length) \pm standard deviation. b, significant difference between WT and transgenic plants at $P < 0.01$.
