

Reviewer Figure 2. Expression of *pdgfra* is diminished in the lateral plate mesoderm of *hand2* mutants.

(A-D) Dorsal views, anterior to the top, depict the expression of *pdgfra* in wt (A,C) and *hand2* (*han^{s6}*) mutant (B,D) embryos at 14 s. Arrows indicate location of the lateral plate mesoderm in the anterior (A,B) and posterior (C,D) regions of the embryo. Expression of *pdgfra* is reduced in the anterior lateral plate mesoderm (B) and absent in the posterior lateral plate mesoderm (D) of *hand2* mutants.

Scale bar: 60 μ m.
