

A

Figure 1—figure supplement 5.

Quantification of apoptosis mediated increase in lethality in H1650-M3 and H1650

A. The chart depicts quantification of relative amounts of Cleaved-Caspase-3 between H1650-M3 and H1650 from the immunoblots indicated in Figure 1F. Levels of intensity of each band were quantified using imageJ32 software and is represented as a ratio to Pro-Caspase-3. The data represents mean \pm SD from 2 independent experiments. p-value <0.05 , $**<0.005$, unpaired t-test.
