

A

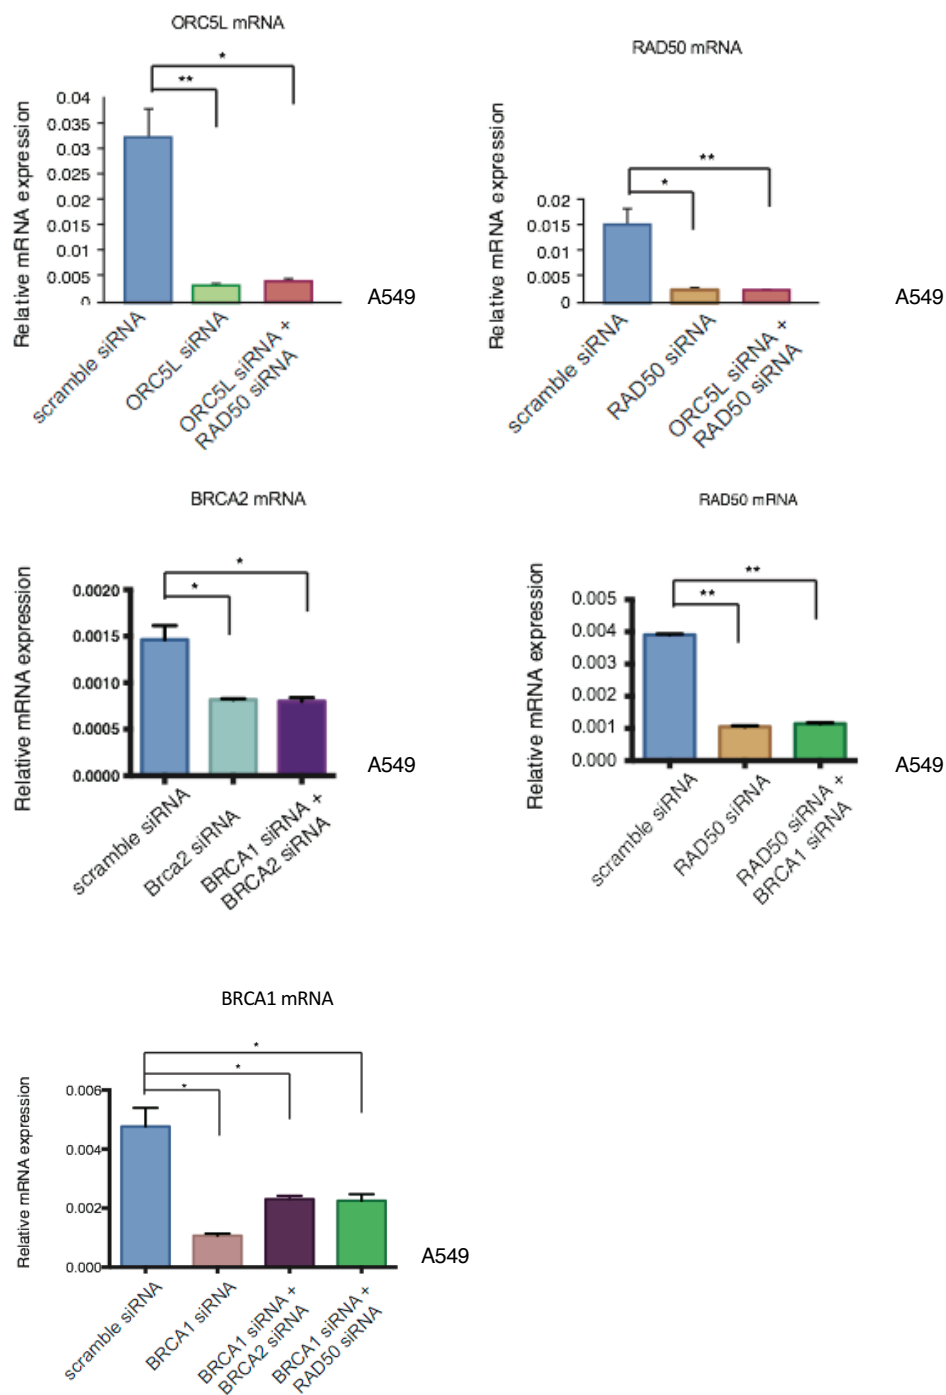

Figure 2—figure supplement 5.

Knockdown efficiencies of the indicated siRNAs in A549 cells.

A. Knock down efficiency upon transfection with the indicated siRNA oligonucleotides and compared to scramble siRNA transfected control cells. Cells were collected 3 days post transfection and analyzed for expression of the indicated mRNA. Each bar represents mean \pm SD of 3 replicates from 2 independent experiments and represents mRNA expression of the indicated gene normalized to GAPDH expression of each cell line. p-value $* < 0.05$, $** < 0.005$, paired t-test.
