

Figure 4—figure supplement 3.

Knockdown efficiencies of the indicated siRNAs in U2OS-DR-GFP cells.

A. Efficiency of knock down upon transfection with the indicated siRNA oligonucleotides, without or with pCBASce-I (plasmid expressing Sce-I endonuclease), and compared to scramble siRNA transfected control cells. Cells were collected 3 days post transfection and analyzed for expression of the indicated mRNA. Each bar represents mean \pm SD of 3 replicates from 2 independent experiments. p-value **< 0.005, ***< 0.0005, paired t-test.
