

A

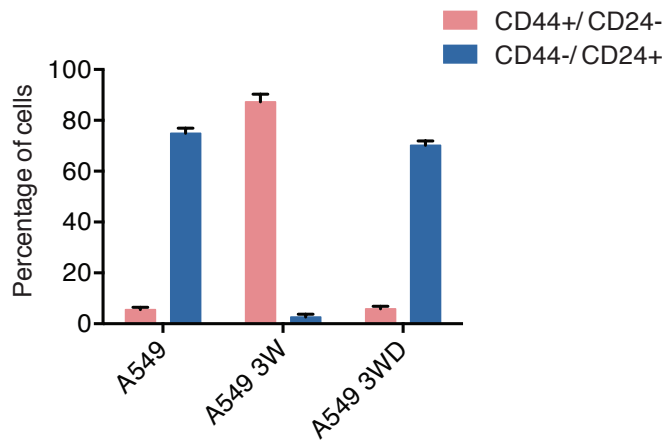

Figure 7—figure supplement 1.

A549 cells undergo changes in surface expression of CD44 and CD24 before, during and post exposure to TGF-beta.

A. The chart depicts the percentage of cells in CD44+/CD24- state and CD44-/CD24+ state, of A549 cell line, before, during and post exposure to TGF-beta. A549 cells before, during and post exposure to TGF-beta were stained for surface expression of CD44 and CD24 and analyzed by FACS. Each bar represents mean \pm SD of 3 replicates from 3 independent experiments. 10,000 cells were analyzed for each replicate of each sample.
