

Figure 9 source data 1. EXA1 does not affect the transcript levels of *NLR* genes *RPS4*, *RPM1* and *RPS2*.

A-C. Transcript levels of *RPS4* (A), *RPM1* (B) and *RPS2* (C) in four-week-old soil-grown Col-0, *exa1-1* and *exa1-2* plants. *Actin7* was used to normalize the transcript levels. Two independent experiments were carried out with similar results. Bars represent means \pm SD (n=2). One-way ANOVA was used to calculate the statistical significance among genotypes, which is indicated by different letters ($p < 0.01$).
