

Figure 6 – figure supplement 2. *SLC2A1* controls glycolysis in HAECs. Control siRNA or siRNA targeted against *SLC2A1* (50 nM) were incubated with HAECs for 72 hours prior to cell lysis, **(A)** RNA purification and qRT-PCR for *SLC2A1* (n = 4) or **(B)** Western blotting for *SLC2A1*. HAECs were treated with either control siRNA or siRNA targeted against *SLC2A1* (50 nM) for 24 hours prior to disturbed flow treatment for 48 hours and **(C)** glycolysis stress test and quantification of glycolysis stress test parameters **(D)** (n = 5).
