

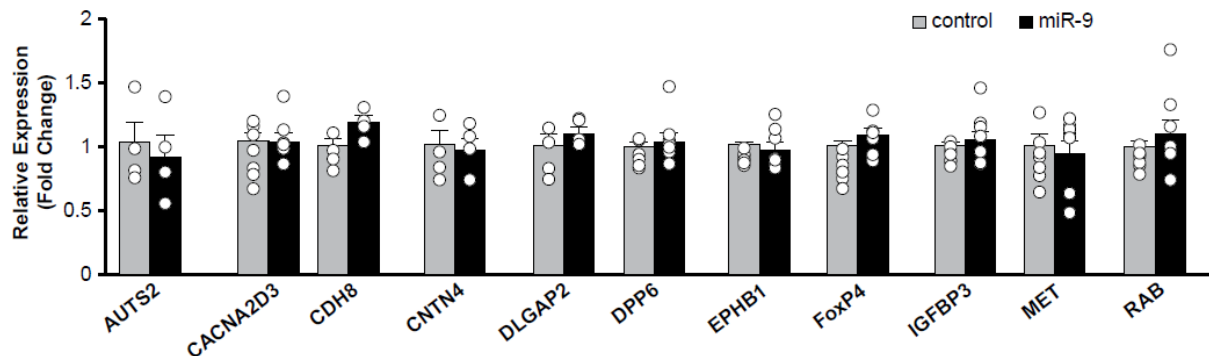

Figure 8 - figure supplement 1

**Downstream target genes of FoxP1 and FoxP2 that did not change expression in Area X by miR-9 overexpression.** Viral injection into Area X was performed at 25 days of age, and gene expression was analyzed one month later by qRT-PCR. Reverse transcription and qRT-PCR were performed two times, and qRT-PCR was performed in triplicate. All p values > 0.05, unpaired t-test. n = 7 for all genes except for *AUTS2*, *CDH8*, *CNTN4*, *DLGAP2*, n = 4. Error bars, SEM.
