

**Figure 3, figure supplement 1.** Analysis of ubiquitin half-life by SDS-PAGE immunoblot analysis of yeast lysates following a cycloheximide (CHX) chase (top panel). Yeast strains used in these experiments express FLAG-tagged ubiquitin from the endogenous *RPS31* locus. Quantitation of ubiquitin degradation (bottom panel) was averaged ( $n=3$ ) and error bars indicate standard deviation. Half-life was estimated in each case using trendline regression (table, inset bottom right).
