

Figure 1-figure supplement 1. Expression of *MiMIC GFSTFs* tagged genes in adult brains. We document the expression patterns and protein localization associated with 49 genes. The MiMIC identification number and affected genes are shown. Note that only ~19% of all genes tested showed detectable GFP signals in adult brains. Images are available on Flypush (<http://flypush.imgen.bcm.tmc.edu/pscreen/rmce/>). Many patterns are in agreement with the expression patterns of published genes/proteins (e.g. *brp*, *Rgk1*, *dlg1*, *cact*). Green: GFSTF. Scale bar: 50 μ m.
