

**Figure 5-figure supplement 2.** Genes expressed in glia. Two genes (*Egfr*, *Tret1-1*) previously documented to be expressed in glia and twelve genes not previously documented to be expressed in glia (*bdl*, *Zasp52*, *rols*, *ine*, *CG5404*, *CG14688*, *CG31663*, *ry*, *CG4752*, *βTub97EF*, *CG32473*, *LManII*) in adult brains. MiMIC T2A-*GAL4s* were crossed with *UAS-mCD8::GFP* (green). Note that the damages were caused by dissections in *MI02852-Egfr* and *MI02136-ry*. Scale bar: 50 μm.
