

Figure 2 – figure supplement 6. Principal Coordinate Analysis (Bray-Curtis similarity metric) of selected individuals with (i) high or (ii) low Shannon H' diversity index (see Supplementary Table S2) in (i) warm (red) and (ii) cold (blue) conditions, respectively. Clustering according to the group (Resistant, dot; Sensitive, circle) was significant (ANOSIM, P-value=0.03 and P-value=0.017, respectively).
