

Figure 2 Supplemental Figure 1

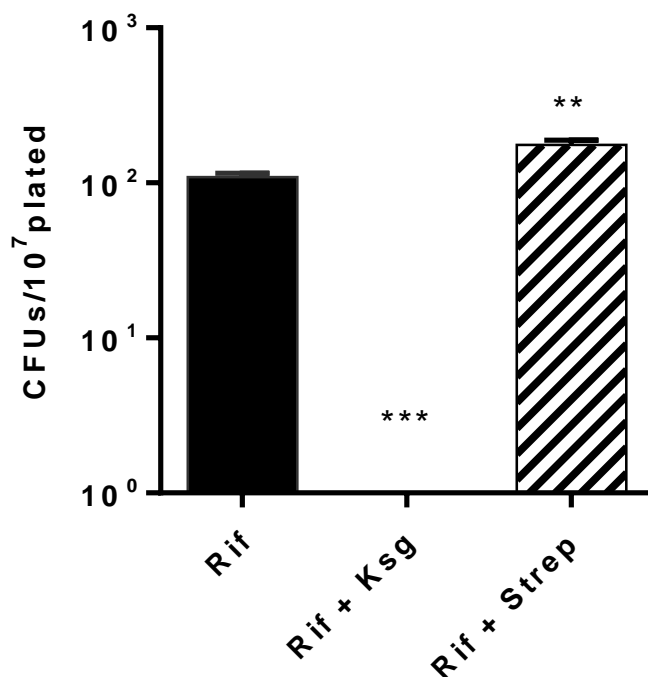

Fig. 2 Supplemental Fig. 1. Kasugamycin but not streptomycin decreases Msm rifampicin plate tolerance. Cells were plated on rifampicin-agar +/- kasugamycin (50µg/ml) or streptomycin (0.2 µg/ml) or LB alone. Survival fraction on rifampicin was measured after 5-7 days. **p<0.01, ***p<0.001 by Student's t-test.
