

A**B**

Figure 4 - figure supplement 1. Purified periplasmic components of the Mla system remain bound to glycerophospholipids. (A) Chromatogram of LC-MS/MS of glycerophospholipids extracted from purified MlaC. Peaks were identified based on MS and elution time. PG, phosphatidylethanolamine. PE, phosphatidylethanolamine. **(B)** Chromatogram of LC-MS/MS of glycerophospholipids extracted from purified MlaD soluble domain.
