

Figure 2 – figure supplement 3. Representative electron density maps in the two reconstructions. A) showing overall fit of the atomic structural models into the corresponding reconstructions. Maps are filtered to local resolutions. left panel - wide clamp conformation (global resolution at 3.7 Å), right panels - narrow clamp conformation (global resolution at 3.8 Å). **B)** Views showing structural models of Ocr fitted into the electron density map and the surrounding RNAP. **C).** Well defined regions showing clear density of RNAP and Ocr including side chains.
