

Figure 2- figure supplement 2: Visualisation of Elkin1-iso1 and -iso3 with laser-scanning confocal microscopy.

WM266-4 cells were transfected with plasmids encoding Elkin1-iso1-GFP (**A**) or Elkin1-iso3-GFP (**D**). Cells were additionally transduced with a vector encoding a Golgi-RFP marker (**B,E**). Overlays are presented in (**C,F**). It is clear that Elkin1-iso1 localises partially, but not exclusively, to the Golgi. Scale bar, 10 μm .
