

A.

B.

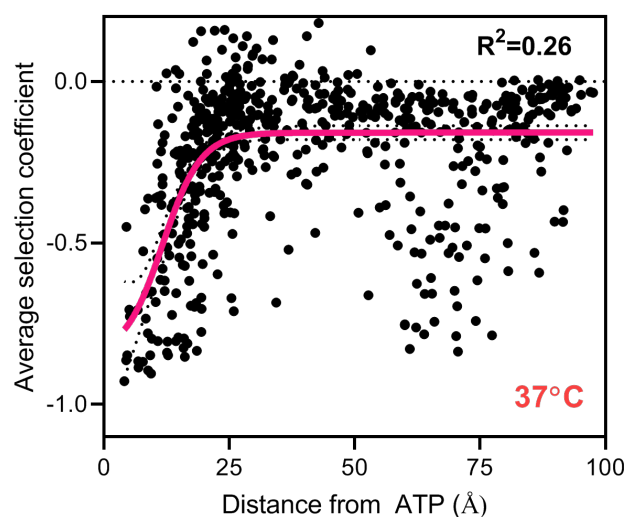

Figure 1 – figure supplement 5. A. The average selection coefficient at each position in standard (30°C) conditions correlates with distance to ATP ($R^2 = 0.49$). B. The average selection coefficient at each position at 37°C does not correlate as well with distance to ATP as in standard conditions ($R^2 = 0.26$). The data points were fit to a sigmoid function.
