

Figure 2–figure supplement 2: Oligomeric states of purified Cch2 (a) and CCPol-MP (b,c). a) Blue native PAGE of Cch2. M denotes a molecular weight marker. Note that under these conditions, the Cch2 bands migrate consistently slower than expected. b) Blue native PAGE of CCPol-MP. M denotes a molecular weight marker. c) Comigration of CCPol and MP during size exclusion chromatography on a Superdex 75 gel filtration column, analysed by SDS-PAGE. M denotes a molecular weight marker.
