

Figure 3 - Supplemental Figure 2. No difference in behavior among control groups. A. Mean percentage of marbles buried by *Mecp2^{fl/y}* controls (n = 16), wild-types (n = 5), and *Vip^{Cre}* controls (n = 4). B. Left: Preference index for time spent with an unfamiliar conspecific in a small holding cage versus an empty cage for *Mecp2^{fl/y}* controls (n = 16), wild-types (n = 6), and *Vip^{Cre}* controls (n = 4). Right: Preference index for approaches made to within 5 cm of the conspecific or the empty holding cage for each group.
