

Figure 2 - figure supplement 4

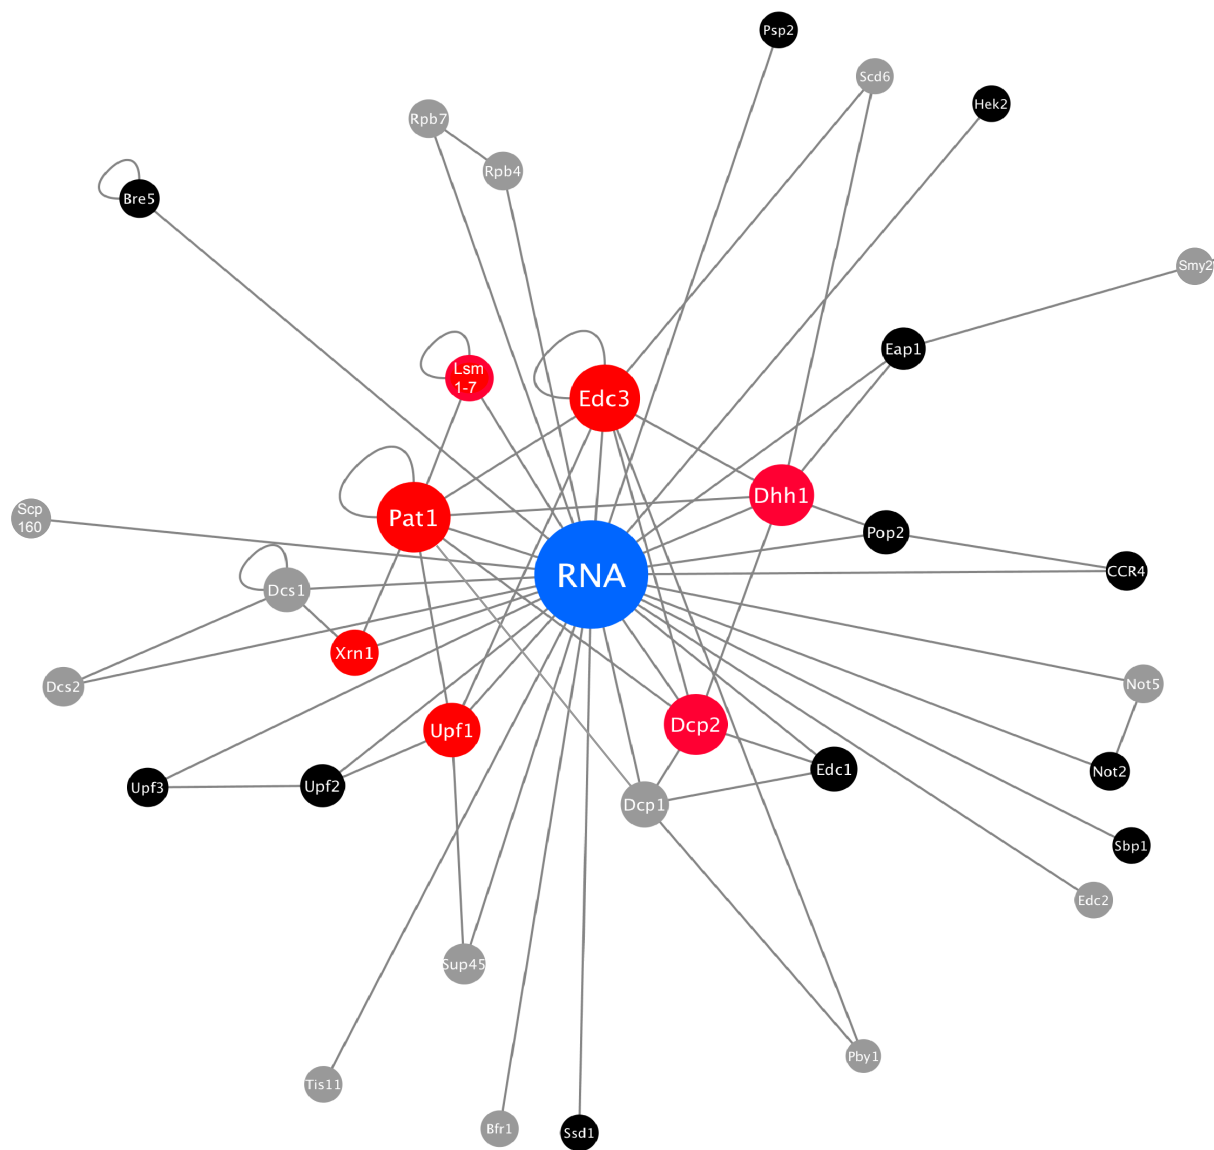

Figure 2 – figure supplement 4. Protein-protein and protein-RNA connections among regular P body proteins. Protein-protein and protein-RNA interactions are summarized from literatures as shown in Table 3. Red, HC P body proteins. Black, LC P body proteins. Grey, 12 P body proteins that lacked clear punctate localization in our studies. Size of node and distance of other nodes to RNA node reflect its centrality.
