

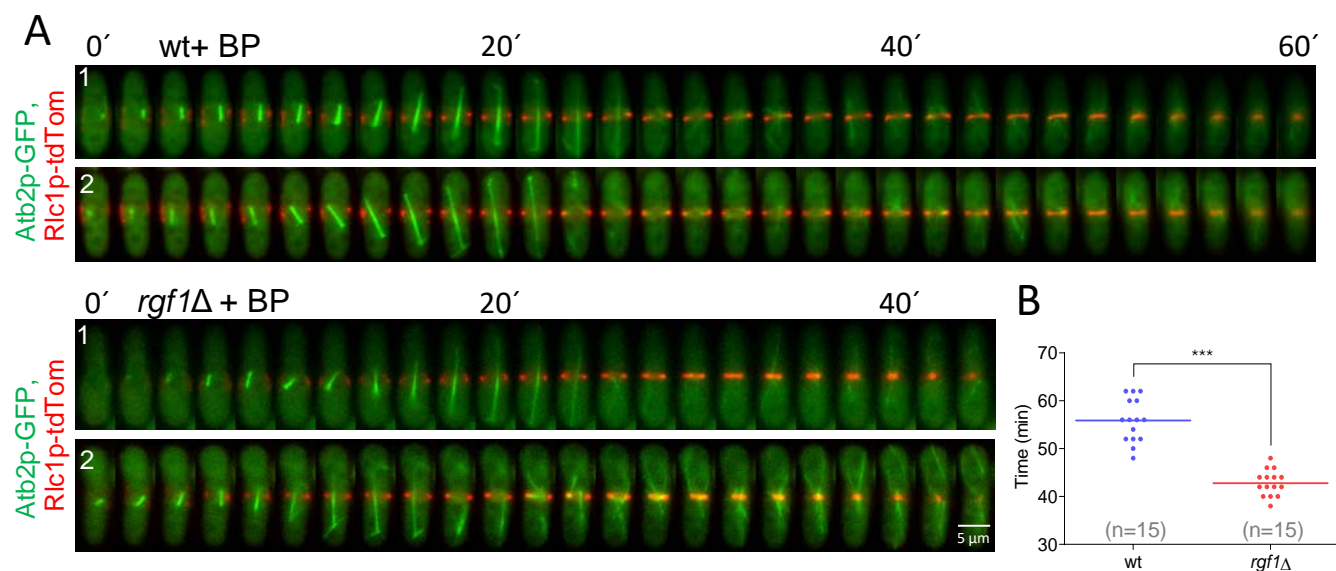

Figure 2-figure supplement 1

Timing of cytokinesis in wild type and *rgf1Δ* cells treated with BP (Figure 2-figure supplement 1).

(A) Time-lapse series of wild type and *rgf1Δ* cells expressing Rlc1p-tdTomato as a contractile ring marker and Atb2-GFP as a cell cycle stage marker. Cells grown at 28°C were imaged in the presence of Blankophor (5μg/ml). (B) Quantitation of the timing of cytokinesis (from spindle formation until ring closure) in wild type (*n*=15) and *rgf1Δ* (*n*=15) individual cells is shown.
