

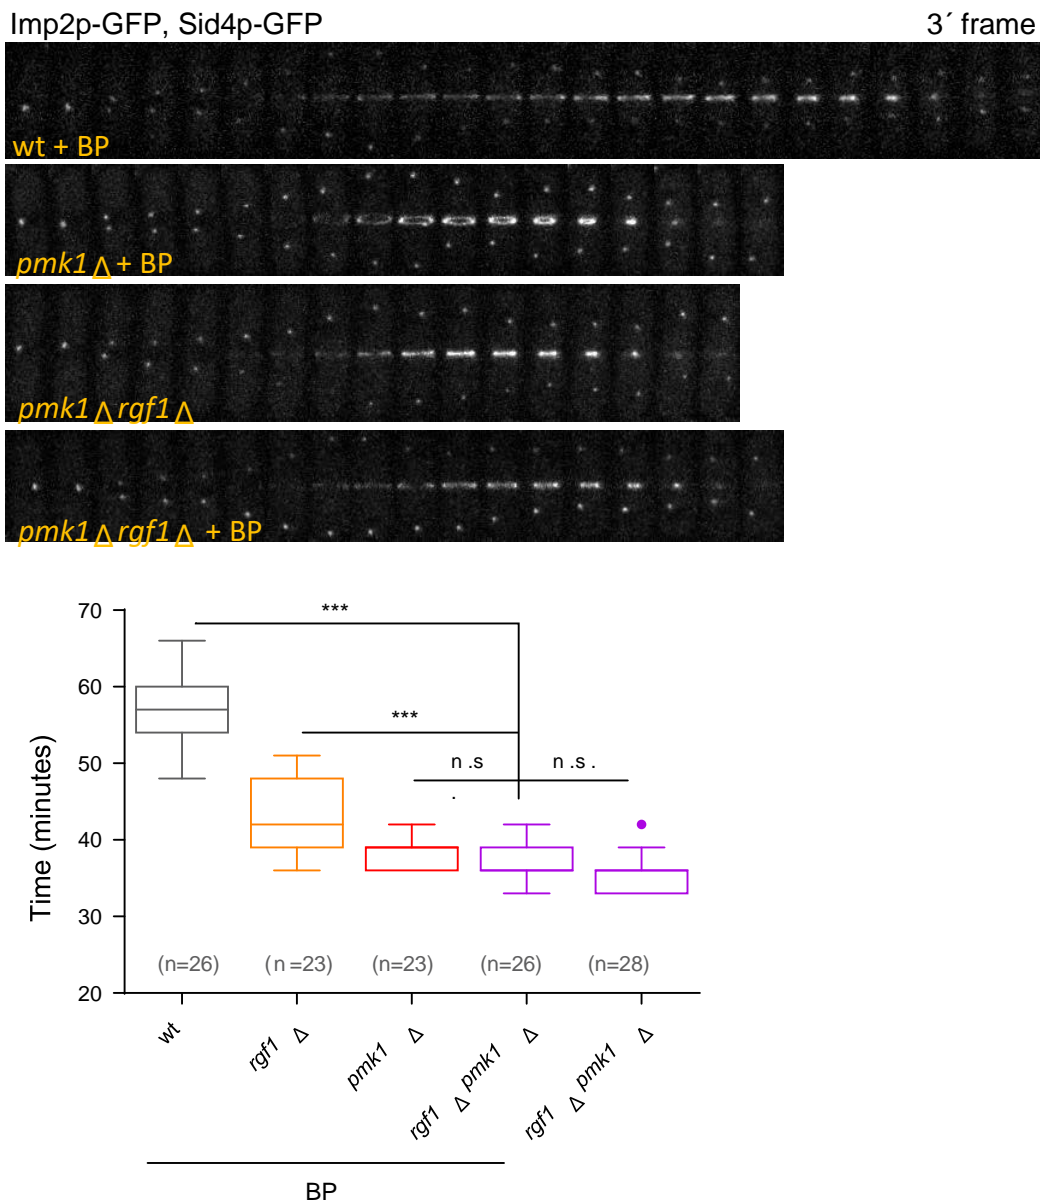

Figure 4-figure supplement 4

Timing of cytokinesis in *rgf1*Δ *pmk1*Δ cells treated with BP (Figure 4-figure supplement 4).

Time-lapse representative series and quantitation of the timing of cytokinesis (from SPB separation to the end of CAR contraction) in wild type, *rgf1*Δ, *pmk1*Δ and *rgf1*Δ *pmk1*Δ cells expressing Imp2p-GFP and Sid4p-GFP. Cells were grown at 28°C and a time-lapse analysis was carried out in the presence or the absence of BP (5μg/ml) when indicated. Asterisks indicate the statistical significance of the difference between the two conditions. Statistical significance was calculated by ANOVA followed by Šidák's multiple comparisons test (n.s. $p > 0.05$; *** $p < 0.0001$).
