

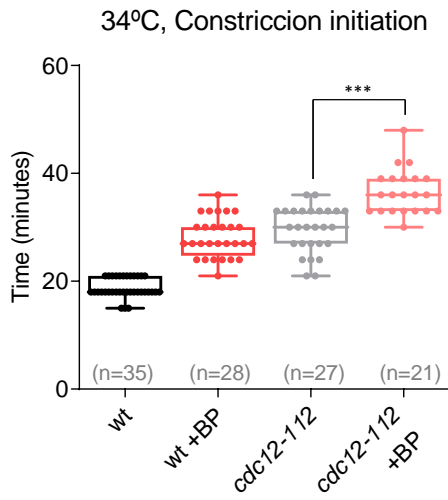

Figure 6-figure supplement 2

Constriction initiation in *cdc12-112* cells (Figure 6-figure supplement 2).

Time taken for the initiation of constriction in wild-type and *cdc12-112* cells grown at 28°C and shifted to 34°C 1h before time-lapse imaging in the presence or absence of BP. (t=0 is SPB separation). Asterisks indicate the statistical significance of the difference between strains. Statistical significance was calculated by ANOVA followed by Šídák's multiple comparisons test (n.s. $p > 0.05$; ** $p < 0.005$; *** $p < 0.0001$).
