

Figure 8-figure supplement 2. Best fits of B-cell numbers in autoHSCt patients. Best fits (black lines) to the normalized cell number data (black dots). Absolute numbers (cells per milliliter of blood) of naive ($\text{CD}19^+\text{IgM}^+\text{CD}27^-$), Ig class-switched memory ($\text{CD}19^+\text{IgM}^-\text{CD}27^+$) and IgM⁺ memory ($\text{CD}19^+\text{IgM}^+\text{CD}27^+$) B-cells were corrected for noise as described material and methods. The median cell numbers (dotted grey line) and the corresponding IQR (interquartile range, grey area) for healthy controls are shown.
