

Figure 3-figure supplement 1

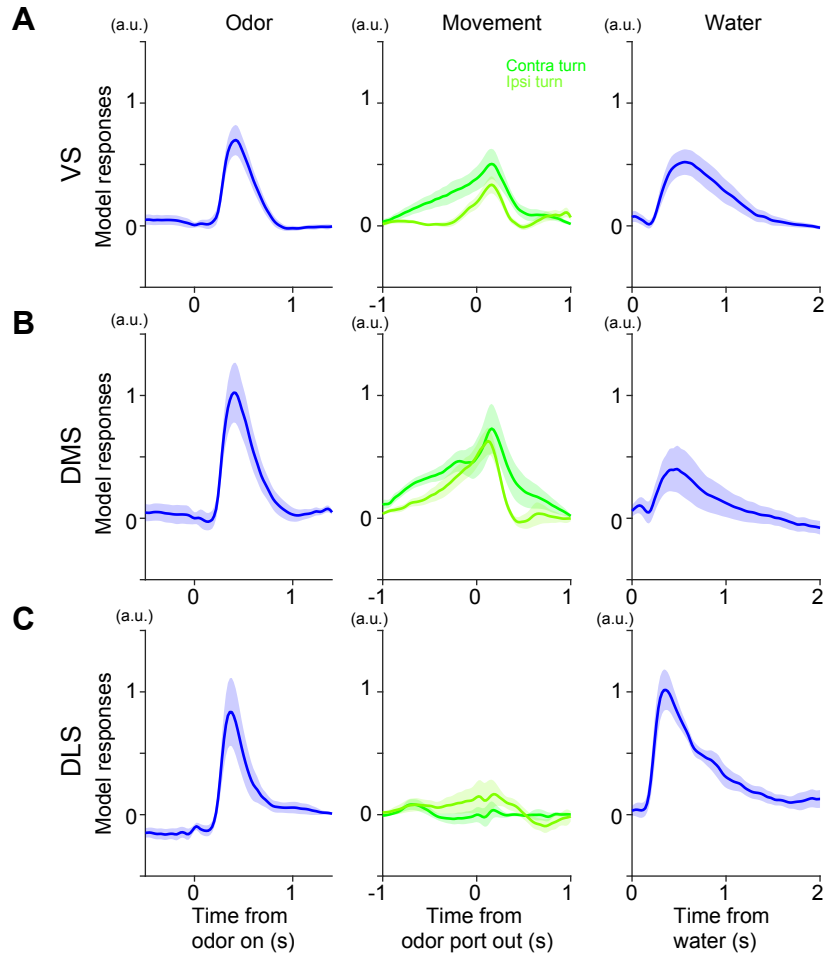

Figure 3-figure supplement 1. Model responses in a task with fixed amounts of reward
Responses at odor onset, odor port out (choice movement onset) and water onset in Kernel models fitted with dopamine axon responses in VS (A), DMS (B) and DLS (C). Arbitrary unit (a.u.) was determined by model-fitting with z-score of GCaMP signals. n=9,7,6 animals for VS, DMS, DLS. mean \pm SEM.
