

Figure 6-figure supplement 1: POA neurons provide direct inhibition onto few PAG-USV neurons

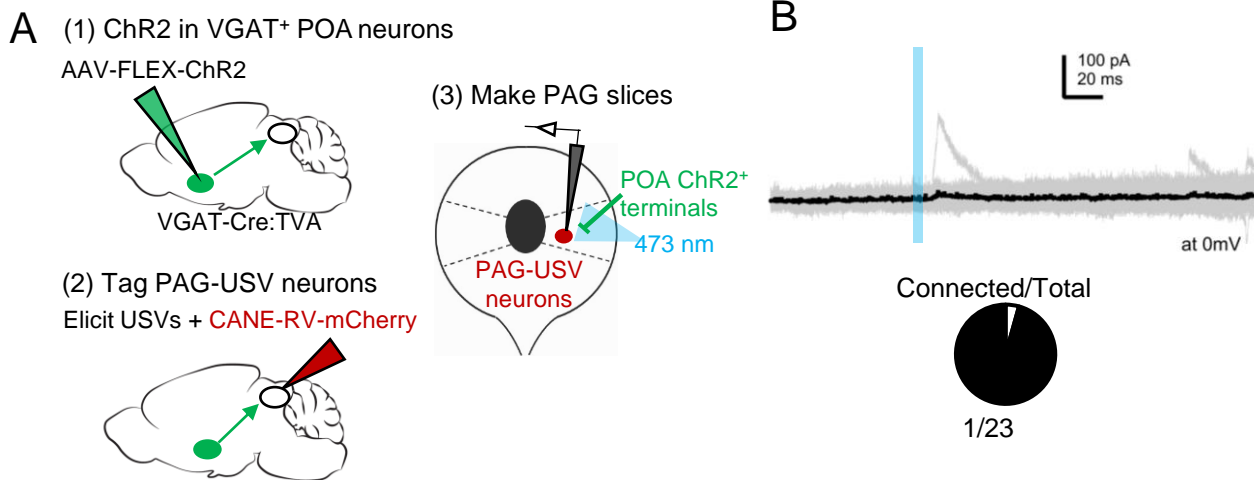

Figure S10, related to Figure 6. POA neurons provide direct inhibition onto few PAG-USV neurons.

(A) Viral strategy (left) and schematic (right) for whole-cell patch clamp recordings from fluorescently identified PAG-USV cells while optogenetically activating POA_{PAG} axons. (B) Light-evoked IPSCs were observed in 1 of 23 mCherry-labeled PAG-USV neurons recorded from 7 mice. See also Figure S10-Source Data 1.
