

Figure 7-figure supplement 1: Truncation of APC affects abundance and diffusion of wild-type but not mutant β -catenin in the nucleus.

(B) Both β -catenin alleles of HCT116 cells bind to APC, GSK3 β and Axin1. IP with anti-APC antibody was performed GFP/Clover and Cherry were detected (left panel). IPs with RFP/Cherry and GFP/Clover beads were performed and β -catenin, Axin1 and GSK3 β were detected (right panel). Representative experiments from 3 independent are shown. The same samples were used for Figure 2C.
