

Figure 2 - figure supplement 1: Sample units. Raster plots and corresponding PSTHs of three example Movement Units (A,C,E) and three example Turn Units (B,D,F). Conventions are the same as in Figure 2A-D. Horizontal pairs of colored stars indicate times with significantly different firing rates for the corresponding pairs of trial types ($p<0.1$, cluster mass test). S and U indicate subject identity for each unit. N_t indicates the total number of trials for each unit.
